BRAIN TEASER

You're facing a wall with three identical switches, all flipped down. In a closed room next door are three light bulbs you cannot see. Each switch controls one light bulb. All switches are initially down and all light bulbs are off. You may flip the switches as much as you like but may only enter the room with the light bulbs once.

When you enter the room, how can you determine which switch operates which light bulb?

Look for the answer in this week's *Graphic!*
